

DR. KARAPETIAN'S CATARACT PRE-OPERATIVE EYE MEDICATIONS & INSTRUCTIONS

1) Antibiotic: TAN bottle top-Ciprofloxacin

breakfast, lunch, dinner, bedtime

4 times per day

2) Anti-Inflammatory: GREY bottle top-Ketorolac

breakfast, lunch, dinner, bedtime

4 times per day

- Please **start** applying **both** eye drops **2 days before** surgery.
- If you feel you did not get the drop in the eye, please apply again. Better to have too much than too little (right now).
- Please wait **5 minutes** between eye drops.
- Prednisolone-PINK/WHITE top, wait until day after surgery for instructions

3) Eyelid washes

- Wash, very gently, the **CLOSED** eyelids **2 times daily**, I recommend with baby shampoo, as it is “no tears” and very gentle if some gets in the eye.
- Please do this for the **2 days before** your Cataract surgery.
